ANESTHESIOLOGY 2019; 130:192–202

Australian and New Zealand College of Anaesthetists

Fellowship Survey – Summary report
November 2021

Z. Keon-Cohen et al

Anaesth Intensive Care 2017 | 45:3

A survey of Australian and New Zealand anaesthetists' attitudes towards resuscitation orders in the perioperative setting

Z. Keon-Cohen*, P. S. Myles†, D. A. Story‡

“It’s always further than it looks. It’s always taller than it looks. And it’s always harder than it looks.”
—The Three Rules of Mountaineering

Is the topic/aim important?

Depends on “readership”

Who is the survey for?

Overcome: “Who cares?”

Article

*Anaesthesia
and Intensive Care*

A survey of the choice of general anaesthetic agents in Australia and New Zealand

What is the question?

For any study introduction:

- What is known?
- What is unknown?
- What is the question?
- Why it is important?

Survey research: the big 3

1. Attitudes
2. Knowledge
3. Practices / approaches

Aim / Question / Hypothesis

Aim: determine anaesthetists' coffee preferences

Hypothesis: Anaesthetists prefer barista coffee

RQ: Do more anaesthetists prefer barista coffee to instant coffee?

More specific is easier to analyse but needs valid survey questions

Prelude to clinical trials

Letter

Survey of attitudes towards a randomised trial about sugammadex, neostigmine and pulmonary complications

Population

Type of population

The question will affect the population and vice versa

They must be in tune with each other

Also affects design and interpretation

Accessibility

- Email
- Phone – mobile vs landline
- Post
- F2F

Sample of the population

It would be nice to ask entire populations

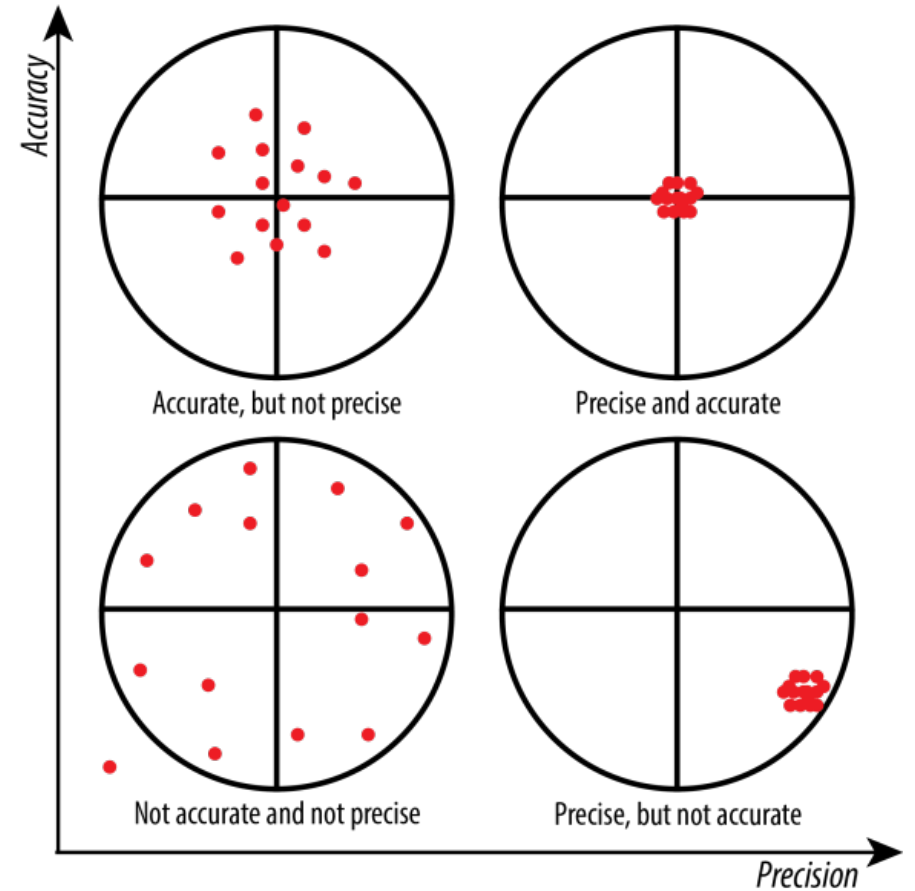

OK if small population: eg all Directors of Anaesthesia in Victoria

Instead usually look for REPRESENTATIVE sample

Want accurate and precise

Increased size affects precision (usually)

However, ultimate precision affected by response rate

<https://wp.stolaf.edu/it/gis-precision-accuracy/>

The Literary Digest

NEW YORK OCTOBER 21, 1936

Topics of the day

LANDON, 1,293,669; ROOSEVELT, 972,897

Final Returns in The Digest's Poll of Ten Million Voters

Well, the great battle of the ballots in the Poll of ten million voters, scattered throughout the forty-eight States of the

Iron National Committee purchased The Literary Digest?" And all types and varieties, including: "Have the Jews purchased

returned and let the people of the Nation draw their conclusions as to our accuracy. So far, we have been right in every Poll. Will we be right in the current Poll? That, as Mrs. Roosevelt said concerning the President's reelection, is in the 'lap of the gods.' "We never make any claims before election but we respectfully refer you to the relation of one of the most noted citizens

		
Nominee	Franklin D. Roosevelt	Alf Landon
Party	Democratic	Republican
Home state	New York	Kansas
Running mate	John Nance Garner	Frank Knox
Electoral vote	523	8
States carried	46	2
Popular vote	27,752,648	16,681,862
Percentage	60.8%	36.5%

Problems (errors) with this survey included:

- Unrepresentative sample: affluent Americans with phones
- Low response rate (20%)
- Non-responder bias (Roosevelt voters tended not to respond)
- Precise but not accurate

Rule of thumb: +/- less than 5%
Allow for response rate

Fig. 2. Effects of different planned margins of error ($\pm\%$) and the 95% and 99% CIs on sample-size estimations for a survey of the entire membership of the American Society of Anesthesiologists ($N = 52,905$). Note: The actual required sample size will also be affected by the response rate.

Ethics and governance

What is human research?

Human research is conducted with or about people, or their data or tissue. Human participation in research is therefore to be understood broadly, to include the involvement of human beings through:

- taking part in surveys, interviews or focus groups;

Tips:

- 1) Submit surveys to an accredited HREC
- 2) Submit full survey with ethics application
- 3) Aim for low risk pathway
- 4) Hope HREC will allow: responding = informed consent

"need to know"
information

"nice to know"
information

<https://blogs.articulate.com/rapid-elearning/>

Too many questions...

Satisficing, portmanteau of satisfy and suffice

Increasing time to complete associated with possible bias

- 1) Less time spent on questions,
- 2) Not answering all questions
- 3) Abandoning the survey

Rule of thumb:

Aim for < 10 mins

+

Demographics at end

Department of Critical Care

Closed format

Pros

Standardized responses,
Take less time to complete,
Easier to analyse.

Cons

Can be more difficult to write
Response options must include all important options
Each option should be distinct.
Including every possible option = excessively long lists

One mitigating strategy: include “other” with free text box

Always include a “Any other comments?” free text box

Closed Format Responses

1. Multiple choice

How many minutes do you usually wait to see a doctor in our clinic?

less than 5 5-14 15-30 more than 30

2. Rating scales

How would you rate the waiting time to see a doctor in our clinic?

1 2 3 4
| | | |
poor average good very good

3. Pictorial scales

How happy are you about the waiting time to see a doctor in our clinic?

4. Agreement scales (Likert-type) scales

The waiting times in our medical clinic are acceptable, (please circle one)

strongly disagree disagree uncertain agree strongly agree

5. Visual analogue scale (10 cm line)

How would you rate the waiting time to see a doctor in our clinic?

very poor -----X----- very good

Diverging stacked bar chart

Pretesting (Piloting) the Survey

Pretesting typically conducted in two phases.

1. Research team: reviews all aspects
 - Cover email / letter
 - Instructions
 - Order and flow of questions
 - Questions are ambiguous and/or are being consistently missed.
 - Time to complete
2. Small subset (5-10) of the intended target group, repeat above.
 - Informally or structured focus groups.
 - Pretest even validated surveys: may be affected by the context of the survey eg UK vs ANZ

Without piloting, persisting unrecognized biases are more likely.

The free side of our freemium model

Here are some of the core features we offer in our free (BASIC) plan:

- Asking a limited number of questions per survey
- Collecting a limited number of responses per survey
- Applying one filter or crosstab to your survey data

Anonymous vs identified

Anonymous:

- encourage responding
- reduce bias; increase honesty in controversial areas
- but reminders go to all

Identified:

- smaller reminder pool
- perceived risks
- may increase non-responder rate (loss of precision)
- may increase responder bias (loss of accuracy)

Identified but with third party handling data

- may reduce perceived risk

ANZCA + KPMG

Response Rate

Background

Since 2010 the Australian and New Zealand College of Anaesthetists (ANZCA) has commissioned a regular quantitative research study among Fellows to provide the college with an independent assessment of Fellows' attitudes and perceptions. The primary purpose of this research is to help the College in meeting the changing needs of the Fellowship and to assist with its strategic planning.

In 2021, a priority for ANZCA is to ensure the 2022-2026 strategic plan reflects the opinions of its Fellows.

As such, this year's research, the fourth wave to be commissioned, is required to gauge Fellows' thoughts and opinions on the **future direction** of the college.

- A total of 7,643 survey links were delivered to Fellows through email invitation. The survey was open between 19 August and 21 September 2021 during which a total of 2,490 fellows responded, resulting in a good response rate of 33%.

The Margin of Error of this study is estimated between +/-0.8% to +/-1.9% at a 95% confidence.

Rule of thumb: +/- less than 5%

11 point: 0 (not at all important) to 10 (essential) scale

To increase response rate: No compulsory Qs, Third Party (KPMG), targeted follow up X 3, 15 \$100 gift vouchers

Survey participant profile

How long have you been a fellow of the college?

Age:

In which country are you currently based?

What is your gender identity?

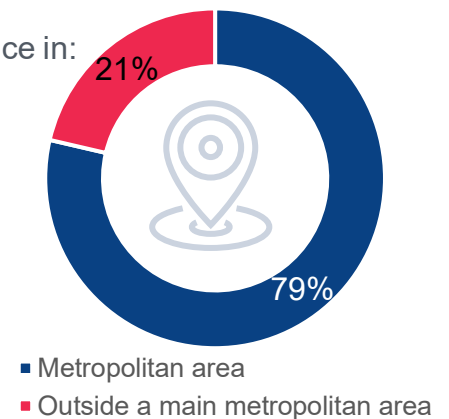

Which of these fellowships do you hold?
Select multiple if applicable

Your location in Australia :

Do you practice in:

ANZCA Fellowship Survey 2021

Importance to ANZCA future direction: 2,490 responses, 33%

Dispersion of mean scores

Training for Fellowship – in detail

Training for fellowship was rated as the most important aspect of focus for the college – an average score of 9.3 out of 10 was recorded. FPM fellows were significantly more likely to rate this aspect as being essential (10 out of 10 rating), relative to ANZCA fellows, 72% vs 64% respectively).

Rating score 9+10 (Essential) by Location and Time as a Fellow:

Total result:
77%

Question: To assist in future college strategic planning we wish to understand your view of the importance of the following for the college. How would you rate the importance of the following for the college? Please select a number on the scale below from 0 (Not at all important) to 10 (Essential). Base, n=2,353

▲ Statistically significant relative to total
▲ Statistically significant ANZCA vs FPM

Perioperative medicine – in detail

Perioperative medicine is important (8 or 9 rating)/ essential (9 or 10 rating) to 82% of fellows. This is consistent across both ANZCA and FPM fellows, as well as geographic areas.

Rating score 9+10 (Essential) by Location and Time as a Fellow:

Total result:
42%

Question: To assist in future college strategic planning we wish to understand your view of the importance of the following for the college.
How would you rate the importance of the following for the college? Please select a number on the scale below from 0 (Not at all important) to 10 (Essential). Base, n=2,355

▲▼ Statistically significant relative to total
▲▼ Statistically significant ANZCA vs FPM

Diversity and inclusion – in detail

Diversity and inclusion is a lower rated future focus area, with two thirds (69%) rating this area as important (7 or 8)/essential (9 or 10). Significantly more FPM fellows rate this area as essential, with 48% of fellows rating *diversity and inclusion* 9 or 10, compared to 36% of ANZCA fellows.

Rating score 9+10 (Essential) by Location and Time as a Fellow:

Total result:
37%

Question: To assist in future college strategic planning we wish to understand your view of the importance of the following for the college.
How would you rate the importance of the following for the college? Please select a number on the scale below from 0 (Not at all important) to 10 (Essential). Base, n=2,356

▲▼ Statistically significant relative to total
▲▼ Statistically significant ANZCA vs FPM

Diverging stacked bar chart

Free-text responses – coded responses

Just over a quarter of survey respondents (688 of 2,490) offered a free text response to **Question:** *Do you have any further comments?*

Core Purposes	No further comments	78%
	Focus on core college matters & not on social issues	5%
	Focus on core purpose - education, training & maintance of standards	3%
Survey Comments	Improvements to training program	2%
	All areas are important	1%
	Comments on survey	1%
General comments regarding the college	Appreciate opportunity to provide feedback	1%
	College is doing a good job	1%
	Improve college website	<1%
	College critiques	1%
Other Issues	Better workforce planning	1%
	Greater support and communication around exams	1%
	Regional and rural issues	1%
	Advocate for and promote the profession	1%
	Prioritise sustainability	1%
	Improvements to CPD courses/requirements	1%
	Lack of support in pain medicine	1%
	International collaboration	<1%
	Procedures to minimize the impacts of COVID-19	<1%
	Play an active role in developing perioperative medicine	<1%
	Continue to work with ASA	<1%
	Advocate on issues pertaining to the health care system	<1%
	High fees/Poor value for money	1%
Wellbeing	Greater focus on health and wellbeing	1%
	Greater commitment to diversity and inclusion	1%
	Address bullying and discrimination	1%
	Other	1%

Table 3. Suggested Minimum Standards for Manuscript Submission

- Clear research question/hypothesis
- Well defined population
- Ethics board approval
- Clear *a priori* sampling and analysis plan
- Piloted survey as an appendix
- $\geq 40\%$ response rate
- Precision: 95% CI with no more than $\pm 5\%$ margin of error on the primary question
- Analysis and discussion of potential sources of bias

Thanks!
